

Title: SYSTEMS AND METHODS FOR FACILITATING ACCESS TO
DOCUMENTS VIA AN ENTITLEMENT RULE

ABSTRACT OF THE DISCLOSURE

Systems and methods are provided to facilitate access to documents via one or more entitlement rules. According to one embodiment, a document tag associated with a document is determined. For example, a content controller may determine a document tag based on information received from a content publisher. A content selection tag associated with a content reader is also determined. It is then arranged for the content reader to receive information associated with the document based on the document tag, the content selection tag, and one or more entitlement rules.
